Environmental Management Systems

Maintain a high standard
of environmental performance

→ Environmental Management Systems

Irish companies are increasingly concerned with achieving and demonstrating sound environmental performance, by controlling the impact of their activities, products and services on the environment.

They do so in the context of increasingly stringent legislation, the development of economic policies and other measures to foster environmental protection and a greater concern on the part of the general public about environmental issues.

We can assist you to implement an environmental management system standard (EMS) such as ISO 14001 or the EU EMAS Regulation, which will enable you to successfully manage the environmental aspects of your operations.

→ benefits

Benefits of implementing an EMS include:

- Improved corporate image
- Ability to address environmental legislation within a structured framework
- Enhanced market opportunities, i.e. green consumerism
- Improved profile for investors and insurers
- Framework for regulatory compliance
- Improved relations with the local community
- Internal/external communications

We can assist your organisation with any stage of the implementation process from project planning, system development, documentation, implementation, training and certification. We can also provide on-going services to assist in the continued management and improvement of your system.

Conformance with ISO 14001 requires many tasks to be undertaken. Our experience takes you, task by task, through: monitoring and measurement; operation control; legal requirements; emergency preparedness; document control; environmental records; communications; training; and many other requisite topics.
